POSSIBLE RUN TONIGHT

Finish today. One hour, one question.

This sheet is not a GO. Nothing starts until stp says go for tonight. Saturday's plan stays as written.

What

A short Run A on the one desk node, started at 23:00 local and stopped at midnight local, so the try is finished on Friday. Bot and Build send. One miner stays with the node. Pulse's agreed count is still Saturday 13:30–16:30 UTC. Tonight's record is our own fee log.

Why

Saturday is the booked run. Tonight is only there so the resync question can be tried earlier, inside the hours that are still Friday. One hour is enough to drop about 9,000 blocks behind and watch the fee after the catch-up. It is not enough for the miner-off test.

How

• Same roles as Saturday. Bot about 300 tx/s on the five public nodes, fee 400 sompi/gram. Build about 300 tx/s on this node, fee 200. Fixed fees. No climbs, no quote skip.
• Exactly one miner. The others stay off. The miner is not switched off as its own step. When the node stops, that miner stops with it and comes back with it.
• If the desk node cannot hold the rate, about a quarter of Build's senders move to the five public nodes. Chains stay on one route.
• At midnight local, senders off, even if the fee has not settled. Log that, and leave Run A and Run B for Saturday.

Clock

When	Local, Brussels (CEST)	UTC
Be ready. Senders idle. Do not start.	22:30	20:30
Start, if stp has said go for tonight.	**23:00**	**21:00**
Node off, about 9,000 blocks behind.	23:05 to 23:20	21:05 to 21:20
Node back. Watch the fee estimate.	from about 23:20	from about 21:20
Hard stop. Done today. Senders off.	**00:00 Sat 17 Oct**	**22:00 Fri 16 Oct**

23:00 local is 21:00 UTC. Midnight local is 22:00 UTC, still Friday in UTC. The shaded rows are the start and the hard stop.

What fits, and what does not

Tonight	Saturday, unchanged
Run A, shortened. About 15 minutes off, then catch up, then fee rows until midnight.	Full Run A from 14:00 UTC, and Run B if the share is at least 15%.
One miner stays with the node.	Run B turns that miner off, then on.
Our fee log is the record.	Pulse's count, 13:30–16:30 UTC, is the record.
Skip Run B.	Pre-test 12:00 UTC. Real test 14:00 UTC.

Ready at 22:30 local / 20:30 UTC

• One kaspad, synced, version 2.1.0. No second node.
• Exactly one miner on. The others off.
• Senders connected and idle. Fee read works. Disk free above 30 GB.
• Public nodes answer for the bot. Saturday's GO files are not a start gun for tonight.
